

Yes. Below is a practical **BRD for** `FasTrack Shop` (`shop.fastrack.cloud`), designed as a **quick-commerce/e-commerce marketplace similar in functionality to Instamart**, but with its own branding, architecture, and business rules.

FasTrack Shop — Business Requirements Document

Product: FasTrack Shop

URL: `shop.fastrack.cloud`

Type: Quick-commerce + Marketplace

Initial Market: Riyadh, Saudi Arabia

Business Model: Own inventory + third-party stores

Target Delivery: 15–60 minutes depending on distance and product availability

1. Vision

FasTrack Shop will allow customers to order groceries, fresh vegetables, household products and everyday essentials through a web/mobile application and receive them at their selected location.

The platform should eventually support:

Customer → FasTrack Shop → Store/Warehouse → Delivery → Customer

Later:

Customer → Local Merchant → FasTrack Delivery → Customer

2. User Types

Customer

- Register/login
- Browse products
- Search
- Add to cart
- Checkout
- Pay
- Track order
- Reorder
- Rate/review

Store/Merchant

Merchants can:

- Register
- Add products
- Manage prices
- Manage inventory
- Accept/reject orders
- Prepare orders
- View sales
- View settlements

Warehouse/Admin

- Product management
- Inventory
- Purchase management
- Order management
- Promotions
- Delivery management
- Customer management
- Merchant management

Delivery Partner

- Login
- Receive delivery
- Accept/reject
- Navigate
- Pickup
- Delivery OTP
- Complete delivery
- Earnings

Super Admin

Full system control.

3. Customer App

Home Screen

Top:

 **Deliver to**

Home / Office / Other

Search:

 Search vegetables, milk, rice...

Categories:

- Fresh
- Fruits
- Vegetables
- Grocery
- Dairy
- Meat
- Chicken
- Fish
- Frozen
- Bakery
- Beverages
- Household
- Personal Care
- Baby
- Electronics

Sections:

 **Best Sellers**

 **Fast Delivery**

 **Fresh Today**

 **Offers**

 **Buy Again**

 **Your Favorites**

4. Product Page

Each product should show:

Product image

Product name

Brand

Weight/quantity

Example:

Nendran Banana
1 kg

Price:

~~SAR 9.99~~
SAR 7.99

Information:

- Available
- Stock quantity
- Description
- Nutrition information where applicable
- Origin
- Expiry information where applicable

Buttons:

– 1 +

ADD TO CART

5. Smart Search

Search should support:

"banana"

Results:

- Nendran Banana
- Cavendish Banana
- Organic Banana
- Banana 1 kg

Also support Arabic search.

For example:

should find banana products.

Later:

AI-powered search:

"I need ingredients for chicken biryani for 5 people"

The system can recommend a basket.

6. Cart

Cart should display:

Product	Qty	Price
Nendran Banana	1 kg	SAR 7.99
Milk	2	SAR 12
Chicken	1 kg	SAR 18

Then:

Subtotal

Delivery fee

Discount

VAT

Total

Suggested products

Customers who bought this also purchased...

7. Checkout

Address

- Home
- Office
- Other

Map location.

Customer can move the pin.

Delivery

Options:

Express

 15–30 minutes

Standard

 30–60 minutes

Scheduled

 Select date/time

Payment

Initially:

- Mada
- Visa
- Mastercard
- Apple Pay
- Cash on Delivery

Later:

- STC Pay / supported wallets
- Store credit
- FasTrack Wallet

8. Order Confirmation

Example:

Order #FT10284

Confirmed ✓

Estimated delivery: 25–35 minutes

Timeline:

Order placed

Store preparing

Ready for pickup

Rider assigned

Out for delivery

Delivered

9. Live Delivery Tracking

Customer sees:

Store

Delivery partner

Customer

Information:

- Rider name
 - Rider photo
 - Vehicle
 - Estimated arrival
 - Live location
 - Call/chat option
-

10. Delivery OTP

When the rider arrives:

Customer receives:

Delivery OTP: 4821

Rider enters OTP.

Order becomes:

DELIVERED

This reduces false delivery claims.

11. Order Substitution

This is especially important for grocery shopping.

Example:

Customer ordered:

Tomato 1 kg

Stock unavailable.

Customer preference:

Option A

Allow substitution

Option B

Contact me before substitution

Option C

Refund unavailable item

Example replacement:

Tomato 1 kg unavailable

Substitute with Tomato 1 kg Premium — +SAR 2

Customer approves.

12. Fresh Product Pricing

For vegetables/fruits, support:

Fixed price

Tomato 1 kg — SAR 5

Variable weight

Customer orders:

Banana — 2 kg

Actual packed weight:

2.15 kg

System calculates:

$2.15 \times \text{SAR } 6/\text{kg} = \text{SAR } 12.90$

The final amount is adjusted before payment or according to the payment method.

This is very important for **AgroFresh integration**.

13. Merchant Panel

Merchant dashboard:

Dashboard

- Today's orders
- Revenue
- Pending orders
- Completed orders
- Cancelled orders
- Low-stock products

Products

- Add product
- Edit
- Delete
- Price
- Stock
- Images
- SKU

- Barcode
- Category

Orders

- New
- Accepted
- Preparing
- Ready
- Picked up
- Completed
- Cancelled

14. Inventory System

Every product should have:

- SKU
- Barcode
- Product name
- Category
- Brand
- Cost
- Selling price
- VAT
- Stock
- Minimum stock
- Warehouse
- Expiry date
- Batch number

Low-stock alert

Example:

 Nendran Banana
Current stock: 8 kg
Minimum: 15 kg

15. FasTrack Warehouse

Your own warehouse can operate as a **dark store**.

Example:

FasTrack Shop — Azizia

Customer orders.

System automatically sends order to:

Azizia Warehouse

Picker receives:

Order #FT10284

12 items

Picker scans products.

Order becomes:

READY FOR DELIVERY

16. Delivery Management

Admin sees:

Available riders

- Rider
- Location
- Status
- Current order
- Battery/fuel
- Delivery count

System automatically assigns orders based on:

- Distance
 - Rider availability
 - Delivery time
 - Number of orders
 - Route optimization
-

17. Multi-Order Delivery

One rider can receive:

Order A

-

Order B

-

Order C

if the destinations are geographically suitable.

System creates:

Optimized delivery route.

This becomes particularly valuable when order volume increases.

18. Promotions

Admin can create:

Percentage discount

10% OFF

Fixed discount

SAR 10 OFF

Buy X Get Y

Buy 2 Get 1

Category discount

Vegetables 15% OFF

Coupon

FAST10

First-order offer

SAR 15 OFF

Free delivery

Orders above SAR 50

19. Subscription

Later:

FasTrack Plus

Example benefits:

- Free delivery
- Exclusive discounts
- Priority delivery
- Monthly offers
- Cashback

20. Loyalty

Customer earns:

FasPoints

Example:

SAR 1 spent = 1 point

Points can be redeemed for:

- Discounts
- Free delivery
- Coupons

21. Customer Wallet

Wallet features:

- Add money
- Refund

- Promotional credit
- Cashback
- Loyalty points

Transaction history.

22. Notifications

Push notifications:

-  Order confirmed
-  Your order is being prepared
-  Rider is on the way
-  Rider has arrived
-  Order delivered

Also:

- SMS
 - Email
 - WhatsApp notifications
-

23. Admin Dashboard

The main dashboard should show:

Sales

- Today's sales
- Weekly
- Monthly

Orders

- New
- Processing
- Delivered
- Cancelled

Customers

- New
- Active
- Returning

Products

- Top selling
- Low stock
- Out of stock

Delivery

- Active riders
 - Deliveries
 - Average delivery time
-

24. Analytics

Important KPIs:

GMV

Revenue

Orders/day

Average Order Value

Customer Acquisition Cost

Repeat Purchase Rate

Cancellation Rate

Delivery Time

Gross Margin

Product Margin

Customer Lifetime Value

25. AgroFresh Integration

This is where your existing business can become the first supplier.

FasTrack Shop

Fresh Vegetables

AgroFresh Inventory

FasTrack Shop

Customer

Example:

AgroFresh has:

Nendran Banana — 100 kg

FasTrack Shop automatically displays:

Nendran Banana

SAR 7.50/kg

In Stock

Customer orders 2 kg.

AgroFresh receives the picking order.

26. Multi-Vendor Marketplace

After your own inventory is working:

Merchant registration

Merchant submits:

- CR
- VAT information
- Bank details
- Store information
- Products

- Documents

Admin approves.

Merchant gets:

Merchant Dashboard

Customer sees:

 Available from 3 stores

Example:

Nendran Banana

AgroFresh — SAR 7.50

Store A — SAR 8

Store B — SAR 9

27. Commission System

For marketplace merchants:

Example:

Customer pays:

SAR 100

Platform commission:

10% = SAR 10

Merchant:

SAR 90

System automatically records:

- Gross sales
- Commission
- VAT
- Delivery
- Refund
- Net settlement

28. Returns & Refunds

Support:

- Missing product
- Damaged product
- Wrong product
- Expired product
- Quality complaint

For fresh vegetables:

Customer uploads photo

Admin reviews.

Possible outcomes:

Refund

Replacement

Store credit

29. AI Features

This can become a major FasTrack advantage.

AI Shopping Assistant

Customer:

"I need vegetables for Kerala sambar."

AI recommends:

- Drumstick
- Carrot
- Beans
- Pumpkin
- Tomato
- Onion
- Curry leaves

Customer:

ADD ALL TO CART

AI Reorder

AI detects:

Customer normally buys milk every 5 days.

Notification:

"Running low on milk? Reorder your usual items."

30. Technology Architecture

For your low-cost development approach, I'd structure the MVP around:

Frontend

- React / Next.js
- PWA
- Responsive mobile-first design

Backend

- Supabase
- PostgreSQL
- Authentication
- Storage
- Realtime

Hosting

- Cloudflare Pages
- Cloudflare Workers

Maps

- Google Maps or another suitable mapping provider

Payments

- Saudi-compatible payment gateway

Notifications

- Firebase Cloud Messaging
-

31. Main Database Tables

```
users
customers
merchants
stores
warehouses
categories
products
product_variants
inventory
inventory_batches
product_prices
carts
cart_items
orders
order_items
order_status_history
addresses
delivery_partners
delivery_assignments
payments
refunds
coupons
promotions
reviews
wallets
wallet_transactions
loyalty_points
subscriptions
notifications
```

32. MVP — Don't Build Everything Initially

I strongly recommend starting with:

Phase 1

Customer

- Registration
- Location
- Categories
- Product search
- Product page
- Cart
- Checkout
- Payment
- Order tracking

- Order history

Admin

- Products
- Categories
- Inventory
- Orders
- Customers
- Promotions

Delivery

- Rider login
- Assigned orders
- Navigation
- Delivery OTP
- Order completion

Initial inventory

Start with around **300–500 products**, not 10,000.

Your first focus can be:

Vegetables + fruits + grocery + dairy + household essentials.

33. Phase 2

Add:

- Merchant registration
 - Multi-vendor
 - Merchant dashboard
 - Advanced inventory
 - Coupons
 - Loyalty
 - Wallet
 - Scheduled delivery
 - Subscription
 - WhatsApp notifications
 - AI recommendations
-

34. Phase 3

Add:

- AI shopping assistant
 - Automatic replenishment
 - Route optimization
 - Multiple warehouses
 - Dark-store management
 - Advanced analytics
 - Dynamic delivery pricing
 - Autonomous/robot delivery integration
-

35. FasTrack Shop Brand

FasTrack Shop

```
shop.fastrack.cloud
```

Suggested tagline:

Everything you need. Delivered.

And the long-term concept can be:

FasTrack Shop

One app. Everything you need.

This gives you a platform that starts as a grocery/quick-commerce application but can eventually become a **multi-vendor marketplace + delivery platform**, rather than being limited to vegetables.
